Continuing Professional Development Programme on

Managing Finance, Assets and Risk

26-28 November 2019

(An ISO 9001:2015 Certified, AICTE & CEA Recognized Institution)

Centre for Promotion of Professional Excellence

INTRODUCTION

Financial management refers to the efficient and effective management of funds so as to accomplish the objectives of the organization. It is a specialized function directly associated with the top management. The growth of an organization depends upon intelligent deployment of funds into both fixed (tangible and intangible) and current assets.

Fixed Assets determine the **PROFITABILITY** of a company in the long-run. This is because the physical assets like Plant & Machinery, Land & Buildings, Furniture & Fixtures, etc need to be utilized optimally to generate revenues for the organization. On the contrary, Current Assets determine the **LIQUIDITY** of a company. This is because of the fact that the magnitude of Receivables, Inventories, Cash, and Payables decide whether we will survive or not in the short-run. Some organizations are asset-rich but not liquid enough to survive and thrive. Managing assets is critical for all kinds of companies be it in the manufacturing or service sectors.

As **PROFITABILITY** and **LIQUIDITY** are two sides of the same coin, one can decrease at the cost of the other. The art of finance is to strike an appropriate balance between:

- Short-run Vs Long-run
- Fixed Assets Vs Current Assets
- Profitability Vs Liquidity

The major challenge for a finance manager is exposure to RISK while doing this balancing act. Risk is the probability of occurrence of a negative event. But Risk is a mix of both DANGER and OPPORTUNITY. A well informed finance manager takes calculated risk by assessing the downside risk and comparing it with the upward potential.

This training course will consider the key risks that organizations face in today's VUCA (Volatile, Uncertain, Complex and Ambiguous) environment. Effective risk management is of vital importance in the global business environment. The programme will explore how organizations may analyse, manage and mitigate/minimise their exposures to both business and financial risk. This training captures illustrations, exercises and case studies to ensure that delegates can relate their learning to real-world issues and problems.

OBJECTIVE

To enable the participants to

- Analyze and interpret an organization's financial reports
- Use financial toolkit to analyze corporate performance
- Critically evaluate the impact on financial position
- Identify the impact of profit, cash flow and risk on capital investment projects and business valuations
- Analyze capital investment and financing decisions using appropriate discount rates by applying Payback, ARR, NPV, Discounted Payback, IRR and MIRR using Excel and provide recommendations for action
- Identify the key success factors/critical factors, investment opportunities and threats within their sector thereby preparing you for future challenges
