CONTINUING PROFESSIONAL DEVELOPMENT PROGRAMME

BOSS Linux Administration

25 – 29 November 2024

(Classroom Training)

Linux™

Introduction

Linux is a Unix-like computer operating system assembled under the model of free and open source software development and distribution. Linux based systems are increasingly being used to power mission critical server systems, network servers and desktops. With its open source heritage and rich applications, organizations have for the first time available with them open standards based platform. Linux is a "modern operating system", with features such as High Data Security, Virtual Machines, memory protection, and preemptive multitasking.

Objectives

The objective of the hands-on training is to help systems engineers and administrators acquire a practical insight into the working and administration of a BOSS Linux based system

Course Coverage

- Overview Of Linux
- Linux File Structure
